

Introduction

The STM32100E-EVAL evaluation board is designed as a complete development platform for the STMicroelectronics ARM® Cortex-M3 core-based STM32F100 microcontroller with HDMI CEC connection, FSMC (Flexible Static Memory Controller), two I²C, three SPI, five USART, 32 Kbytes of internal SRAM, 512 Kbytes of internal Flash memory and JTAG and SWD debugging/programming support.

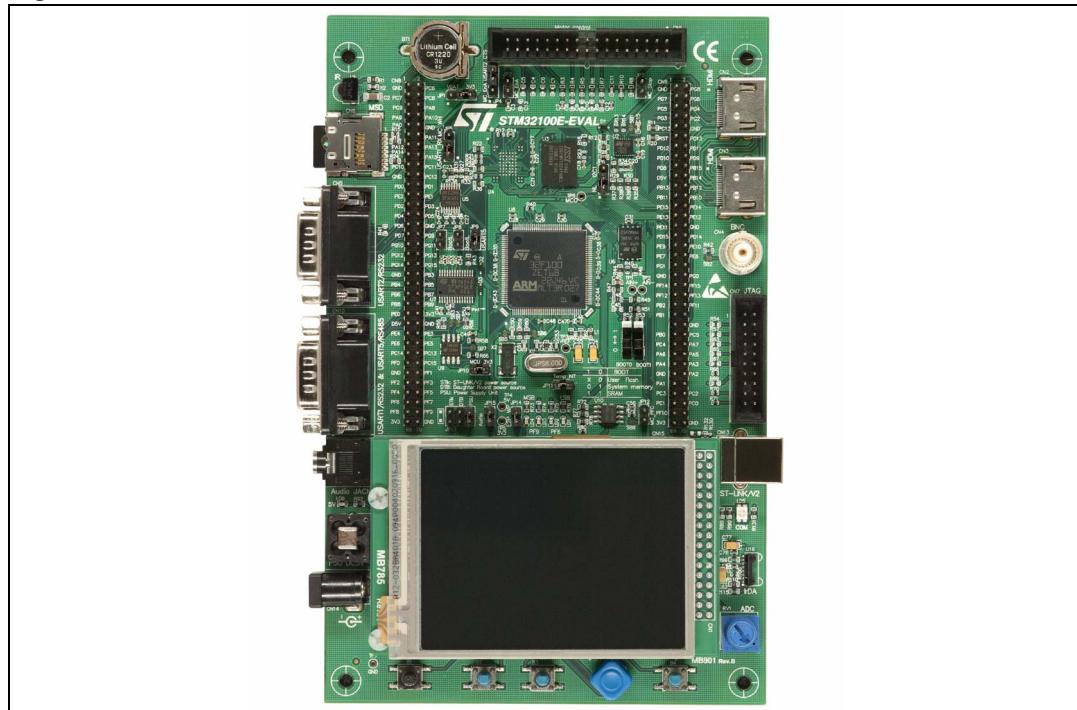

The full range of hardware features on the board helps you evaluate all peripherals (HDMI CEC, SRAM, motor control, LCD, MicroSD card, serial Flash, EEPROM, temperature sensor, speaker, IrDA, RS-232, RS-485... etc.) and develop your own applications.

Extension headers facilitate the connection of a daughterboard or wrapping board for your specific applications. An ST-LINK/V2 is integrated on the board as an embedded debugger and programmer for the STM32F100 MCU.

1 Overview

1.1 Features

- Three 5-V power supply options:
 - Power jack
 - ST-LINK/V2 connector
 - Daughterboard
- Boot from user Flash, system memory or SRAM
- 1 Gbyte (or more) MicroSD card
- 16 Mbytes of serial Flash memory
- 2 Mbytes of SRAM
- 8 Kbytes of EEPROM
- I²C/SMBus compatible serial interface temperature sensor
- 2-channel RS-232 communication interface with RTS/CTS handshake support on one channel
- 1-channel RS-485 communication interface sharing the USART1 connector
- IrDA transceiver
- IR receiver
- Inductor motor control connector
- JTAG and SWD debug support
- 3.2" TFT color LCD with touch screen
- Joystick with 4-direction control and selector
- Reset, wakeup, tamper and user buttons
- Speaker
- 4 LEDs
- RTC with backup battery
- Extension connector for daughterboard or wrapping board
- Embedded ST-LINK/V2 debugger and programmer
- HDMI (High-Definition Multimedia Interface) with Consumer Electronics Control (CEC) connection

1.2 Demonstration software

Demonstration software is preloaded on board Flash memory for easy demonstration of the device peripherals in standalone mode. For more information and to download the latest version available, please refer to STM32100E-EVAL demonstration software available on the web: www.st.com/mcu.

1.3 Order code

To order the STM32F100ZET6 MCU evaluation board, use the order code STM32100E-EVAL.

2 Hardware layout and configuration

The STM32100E-EVAL evaluation board is designed around the STM32F100ZET6 (144-pin LQFP package). The hardware block diagram [Figure 2](#) illustrates the connection between STM32F100ZET6 and peripherals (LCD, SRAM, IR receiver, SPI Flash, USART, IrDA, speaker, HDMI CEC, temperature sensor, MicroSD card, motor control and embedded ST-LINK/V2) and [Figure 3](#) will help you locate these features on the actual evaluation board.

Figure 2. Hardware block diagram

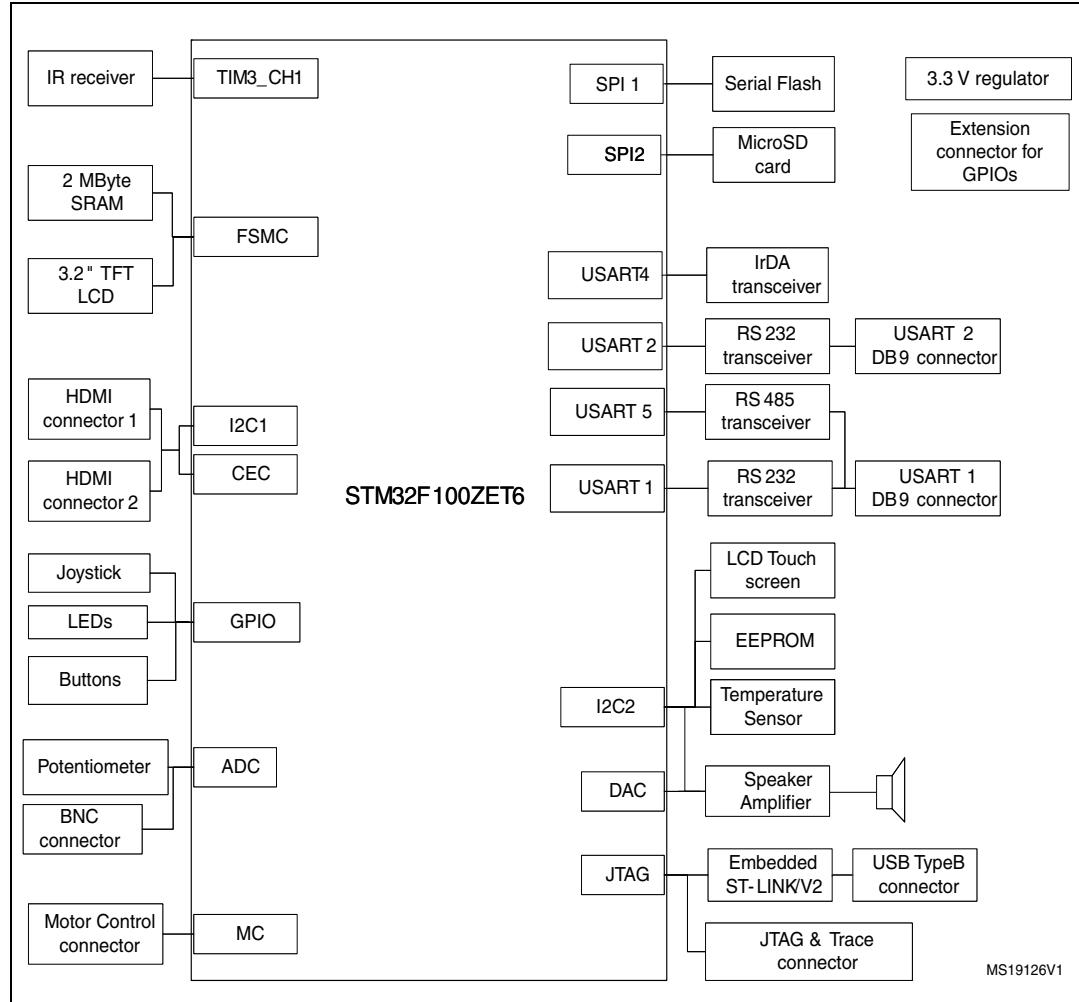

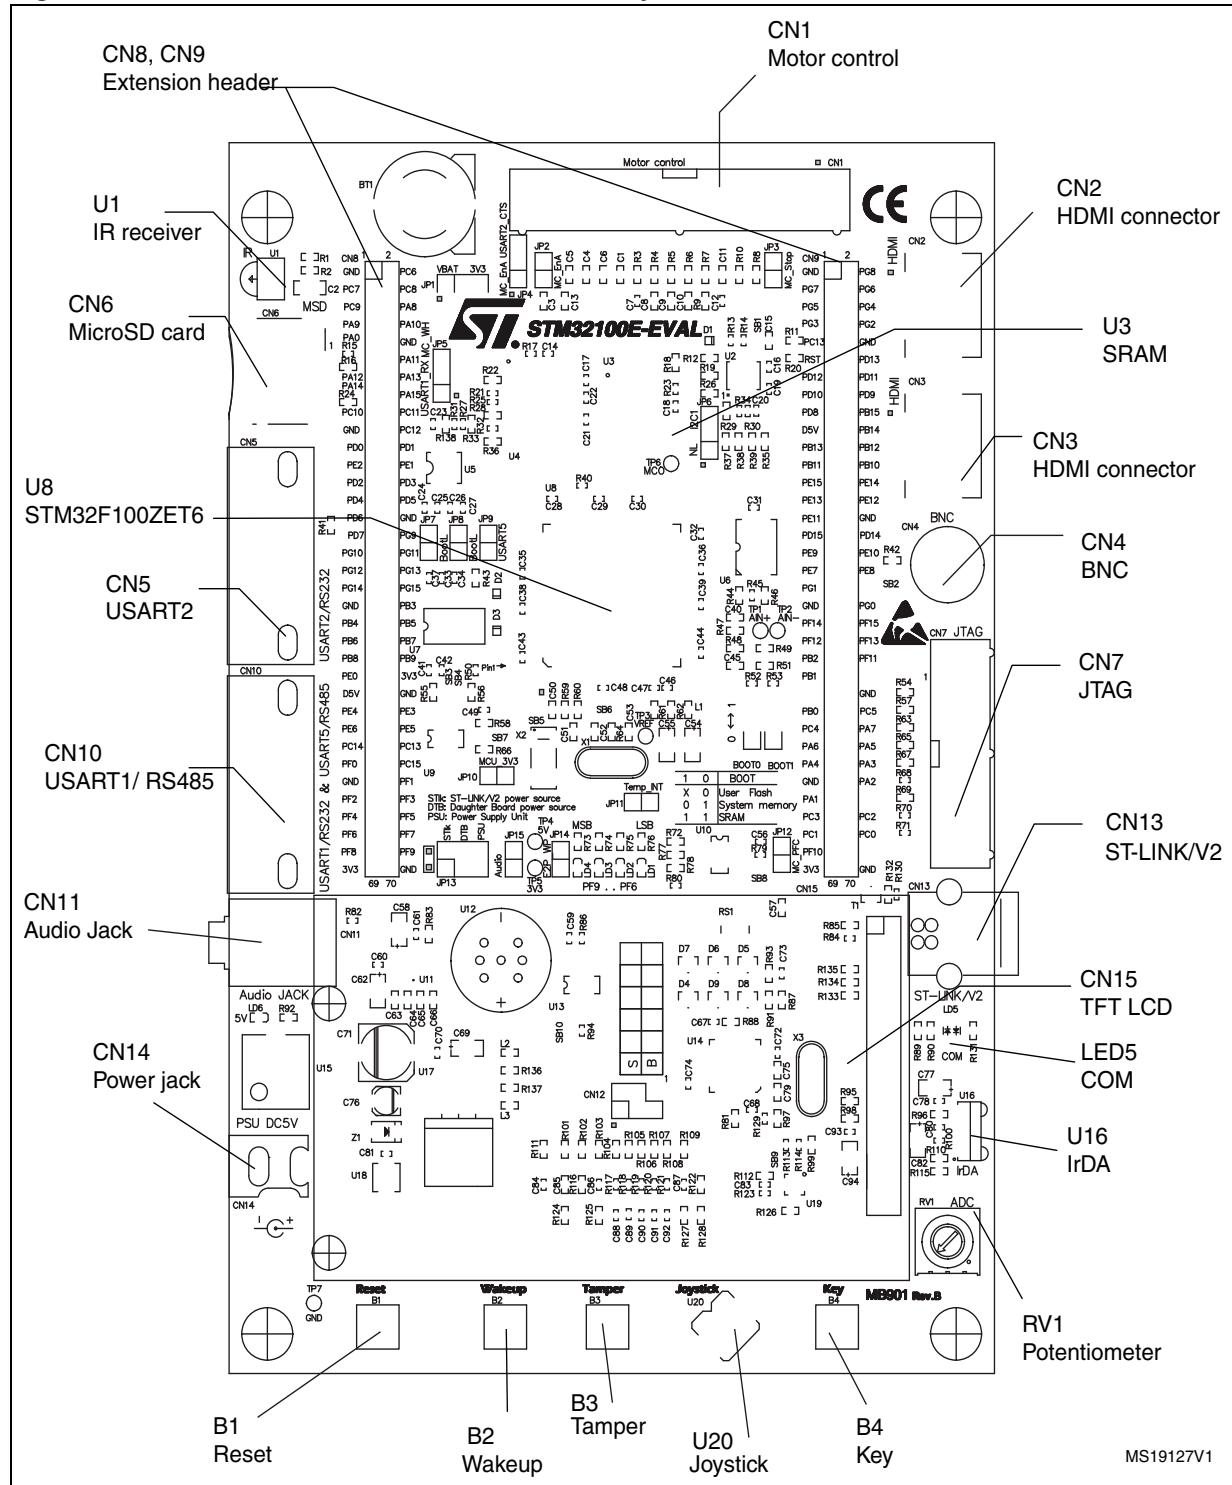

Figure 3. STM32100E-EVAL Evaluation board layout

2.1 Development and debug support

Version 2 of the ST-LINK, known as ST-LINK/V2, is embedded on the board. This tool allows program loading and debugging of the STM32F using the JTAG or SWD interface. Third-party debug tools are also supported by using the JTAG connector (CN7).

A specific driver needs to be installed on your PC for communication with the embedded ST-LINK/V2. The InstallShield package ST-LINK_V2_USBdriver.exe is available from the ST website. To download and install this driver, please refer to **Software and development tools** page for STM32F family available on www.st.com.

Connect the embedded ST-LINK/V2 to the PC via a standard USB cable from connector CN13. The bi-color LED LD5 (COM in [Figure 3](#)) indicates the status of the communication as follows:

- Slow blinking Red/Off: At power-on before USB initialization
- Fast blinking Red/Off: After the first correct communication between PC and STLink/V2 (enumeration)
- Red LED On: When initialization between PC and ST-LINK/V2 is successfully finished
- Green LED On: After successful target communication initialization
- Blinking Red/Green: During communication with target
- Green On: Communication finished and OK
- Orange On: Communication failure

Note: It is possible to power the board via CN13 (embedded ST-LINK/V2 USB connector) even if an external tool is connected to CN7 (external JTAG and SWD).

2.2 Power supply

STM32100E-EVAL evaluation board is designed to be powered by a 5 V DC power supply and to be protected by PolyZen U18 from damage caused by overvoltage and overcurrent fault conditions. It is possible to configure the evaluation board to use any of following three power supply sources:

- 5V DC power adapter connected to CN14, the Power Jack on the board (Power Supply Unit (PSU) in [Figure 3](#), JP13 jumper description in [Table 2](#)).
- 5V DC power with 500mA limitation from CN13, the ST-LINK/V2 type-B USB connector (STI_k in [Figure 3](#), JP13 jumper description in [Table 2](#)).
- 5V DC power from both CN8 and CN9, the extension connector for daughterboard (DTB for Daughterboard in [Figure 3](#), JP13 jumper description in [Table 2](#)).

The power supply is configured by setting the related jumpers JP13, JP1 and JP10 as described in [Table 2](#).

Table 2. Power related jumpers

| Jumper | Description | Jumper setting |
|--|---|---|
| JP13 (selects one of the three possible power supply resources) | For power supply jack (CN14) to the STM32100E-EVAL <u>only</u> , JP13 is set as shown to the right: |  |
| | For power supply from the daughterboard connectors (CN8 and CN9) to STM32100E-EVAL <u>only</u> , JP13 is set as shown to the right: |  |
| | For power supply from ST-LINK/V2 USB connector (CN13) to STM32100E-EVAL <u>only</u> , JP13 is set as shown to the right: (Default setting) |  |
| | For power supply from power supply jack (CN14) to <u>both</u> STM32100E-EVAL and daughterboard connected on CN8 and CN9, JP13 is set as shown to the right: (daughter board must have not its own powersupply connected) |  |
| JP1 | <i>Vbat is connected to +3.3V power when JP1 is set as shown to the right:</i> (Default setting) | 1 2 3 ● [] ● |
| | Vbat is connected to battery when JP1 is set as shown to the right: | 1 2 3 [] ● ● |
| JP10 | Enables consumption measurements of both VDD and VDDA. Default setting: Fitted | |

Danger: RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

The LED LD6 is lit when the STM32100E-EVAL evaluation board is powered by the 5 V correctly.

Note: The recommended AC220V to DC5V power adapter is the PSU-5V2A. It is not included with the board but can be ordered from ST as a separate item. You can also use another equivalent 5V power adapter (polarity compatible with CN14) to power STM32100E-EVAL board via the CN14 power jack on the board. To order the recommended power supply, use the order code: PSU-5V2A.

2.3 Boot option

The STM32100E-EVAL evaluation board is able to boot from:

- Embedded user Flash
- System memory with boot loader for ISP
- Embedded SRAM for debugging

The boot option is configured by setting switch SW1 and SW2.

Table 3. Boot related switches and jumper

| Switch | Boot source | Switch configuration |
|------------|---|----------------------|
| SW1 SW2 | STM32100E-EVAL boot from User Flash when BOOT0 is set as shown to the right: BOOT1 is don't care in this configuration. (Default setting) | |
| | STM32100E-EVAL boot from Embedded SRAM when BOOT0 and BOOT1 are set as shown to the right: | |
| | STM32100E-EVAL boot from System Memory when BOOT0 and BOOT1 are set as shown to the right: | |
| JP8 | The BOOT0 pin of STM32F100ZET6 is connected to RS-232 connector CN10 pin 6 (DSR) for ISP support when JP8 is closed. This configuration is used for bootloader application only. (Default Setting: Not fitted) | |

2.4 Clock source

Two clock sources are available on STM32100E-EVAL evaluation board for STM32F100ZET6 microcontroller:

- X2, 32 kHz crystal for embedded RTC
- X1, 8 MHz Crystal with socket for STM32F100ZET6 Microcontroller, it can be removed from its socket when internal RC clock is used.

Table 4. RTC related solder bridges

| Solder bridge | Description |
|---------------|---|
| SB5, SB6 | PC14 and PC15 are connected to extension connector CN8 when solder bridges SB5 and SB6 are closed. Default Setting: Not fitted |

2.5 Reset source

The reset signal of STM32100E-EVAL evaluation board is active low and the reset sources include:

- Reset button B1
- Debugging tools from JTAG connector CN7
- Daughterboard from CN9
- Embedded ST-LINK/V2
- Bootloader_Reset from RS-232 connector CN10

Table 5. Reset related jumpers

| Jumper | Description |
|--------|--|
| JP7 | Bootloader_Reset signal from RS-232 connector CN10 pin 1 (DCD) is connected to RESET# of STM32F100ZET6 when JP7 is closed. This configuration is used for bootloader application only. Default Setting: Not fitted. |

2.6 Audio

STM32100E-EVAL evaluation board supports playback based on a speaker on the board. Two channels DAC of STM32F100ZET6 are connected to audio amplifier TS4956EIJT which drive both speaker and stereo audio jack output. The audio volume can be adjusted by configuration of audio amplifier through I²C interface.

Table 6. Audio related jumpers

| Jumper | Description |
|--------|---|
| JP15 | The I/O pin PA5 is connected to Audio DAC as DAC2 when JP15 is closed. JP15 must be kept open for connection to serial flash as Flash_SCK. Default setting: Not fitted |

Note: *Channel DAC1 is shared by audio and BNC while channel DAC2 is shared by audio and serial Flash on the board.*

2.7 EEPROM

The EEPROM M24C64-WMN6TP connected to I₂C2 of STM32F100ZET6 is available on the board. Its address can be changed by setting solder bridge SB10.

Table 7. EEPROM related jumper and solder bridge

| Jumper | Description |
|--------|---|
| JP14 | The EEPROM write operations are disabled when JP14 is open. Default Setting: Fitted |
| SB10 | The device address of EEPROM is 0xA0 when SB10 is open and 0xA2 when SB10 is closed. Default Setting: Not fitted |

2.8 IrDA

IrDA communication is supported by IrDA transceiver U16 connected to USART4 of STM32F100ZET6. IrDA can be enabled or disabled by setting PA11.

2.9 Motor control

The STM32100E-EVAL evaluation board supports an induction motor control via a 34-pin connector. Connector CN1 provides all required control and feedback signals to and from the motor power driving board. Available signals on this connector include emergency stop, motor speed, 3-phase motor current, bus voltage, heatsink temperature coming from the motor driving board and 6 channels of PWM control signal going to the motor driving circuit.

Special motor current sampling operation is enabled by setting jumper JP12.

Table 8. Motor control related jumpers

| Jumper | Description | Jumper setting |
|--------|---|--|
| JP12 | The special motor current sampling operation is enabled when JP12 is fitted (PD2 connected to PB4). The I/O pins PD2 and PB4 are disconnected and can be used by daughterboard when JP12 is NOT fitted. Default setting: Not fitted | |
| JP2 | JP2 must be open when encoder signal is from pin 31 of motor control connector CN1. JP2 must be closed when the analog signal is from pin31 of CN1 for special motor. Default setting: Not fitted | |
| JP3 | PA6 is connected to motor control connector CN1 as MC_EmergencySTOP when JP3 is closed. JP3 must be kept on open for serial Flash operation. Default setting: Not fitted | |
| JP4 | PA0 is connected to RS-232 transceiver U5 as USART2_CTS when JP4 is set as shown to the right: (Default setting) | 1 2 3  |
| | PA0 is connected to motor control connector CN1 as MC_EnA when JP4 is set as shown to the right: | 1 2 3  |
| JP5 | PA10 is connected to motor control connector CN1 as MC_WH when JP5 is set as shown to the right: | 1 2 3  |
| | PA10 is connected to USART1_RX when JP4 JP5 is set as shown to the right: (Default setting) | 1 2 3  |
| JP9 | PD2 is used as MC_PFCsync2 output on motor control connector CN1 when JP9 is open. PD2 is used as USART5_RX input when JP9 is closed. Default setting: Fitted | |
| JP11 | PB12 is used as MC_NTC on motor control connector CN1 when JP11 is open. PB12 is used as temperature interrupt input when JP11 is closed. JP11 must be kept closed for TemperatureSensor_INT operation. Default setting: Fitted | |

2.10 MicroSD card

The 1 Gbyte (or more) MicroSD card connected to SPI2 of STM32F100ZET6 is available on the board. MicroSD card chip select is managed by standard I/O port PG6 while MicroSD card detect signal is managed by I/O port PF11.

2.11 Analog input

One BNC connector CN4 is connected to PA4 of STM32F100ZET6 as external analog input or DAC output. The 50 ohm terminal resister can be enabled by closing of solder bridge SB2. A low pass filter can be implemented for BNC connector by replacing of R49 and C45 by ADC input or replacing R48 and C45 for DAC output with the right value of the resister and capacitor as presented in the end user's application.

There are also 2 analog signals available on the board:

- 10K ohm potentiometer RV1 connected to PC4.
- External ADC input which can be connected to TP1 (AIN+) and TP2 (AIN-), R51 should be removed to avoid noise.

2.12 SRAM

The 2 Mbyte SRAM (IS61WV102416BLL-10MLI) is connected to Bank 2 of FSMC of STM32F100ZET6 on the board.

2.13 Serial Flash

A 128 Mbit serial Flash memory connected to SPI1 of STM32F100ZET6, serial Flash chip select is managed by standard I/O port PE6.

Note: JP3 must be kept open for serial Flash operation. Please refer to [Table 8](#) for details.

2.14 Temperature sensor

One I2C interface temperature sensor STLM75 (-55°C to $+125^{\circ}\text{C}$) connected to I2C2 of STM32F100ZET6 is available on the board. Its address can be changed by setting of solder bridge SB8.

Table 9. Temperature Sensor Related Solder bridges

| Jumper | Description |
|--------|--|
| SB8 | Temperature sensor device address is 0x90 when SB8 is open and 0x92 when SB8 is closed. Default Setting: Not fitted |

Note: JP11 must be closed for temperatureSensor_INT operation. Please refer to [Table 8](#) for details.

2.15 Display and input devices

The 3.2" TFT color LCD connected to Bank 3 (FSMC) of STM32F100ZET6 and 4 general purpose LEDs (LD1,2,3,4) are available as display devices. The touch screen is supported on the TFT LCD by I/O port expander STMPE811QTR which is connected via I2C bus to the microcontroller. A 4-direction joystick with selection key, general purpose button (B4), wakeup button (B2) and tamper detection button (B3) are available as input devices.

Table 10. Touch screen related solder bridge and jumper

| Jumper | Description |
|--------|---|
| SB9 | The device address of I/O expander U19 is 0x82 when SB9 is open and 0x88 when SB9 is closed. Default Setting: Not fitted |

2.16 HDMI CEC

Two HDMI connectors CN2 and CN3 are available on STM32100E-EVAL board. The signals CEC, SCL, SDA and HPD are supported and connected to STM32F100ZET6 through HDMI2C1-5DIJ, the ST full integrated ESD protection, level-shifting device and signal booster for control links of HDMI 1.3 transmitter.

Table 11. HDMI CEC Related solder bridge and jumper

| Jumper | Description | Jumper setting |
|--------|---|----------------|
| SB1 | The +5V power pin of HDMI connectors CN2 and CN3 is connected to 5V power on STM32100E-EVAL board when SB1 is closed. Default Status: Open | |
| JP6 | PB7 is connected to HDMI level shifter U2 as I2C1_SDA when JP6 is set as shown to the right: (Default setting) | 1 2 3 ● □ ● |
| | Configuration not used: | 1 2 3 □ ● ● |

2.17 IR receiver

The IR receiver TSOP34836 is connected to PC6 of STM32F100ZET6 on the board.

2.18 RS-232 communication

Two D-type 9-pin connectors are available on STM32100E-EVAL evaluation board:

- CN10 (USART1) connector is connected to RS-232 transceiver U7 with Bootloader_Reset and Bootloader_BOOT0 support for ISP
- CN5 (USART2) connector with RTS/CTS handshake signal support is connected to RS-232 transceiver U5

Note: *Jumper JP4 must be fitted on pins 2-3 for USART2 operations and jumper JP5 must be fitted on pins 1-2 for USART1 operations. Please refer to [Table 8](#) for more details.*

2.19 RS-485 communication

The RS-485 communication on USART5 is supported by RS-485 transceiver ST485ABDR and connected to pin4 and pin 9 of D-type 9-pin connector CN10 (shared with USART1).

Table 12. RS-485 related solder bridges

| Solder bridge | Description |
|---------------|---|
| SB3, SB4 | The external fail-safe biasing are enabled when solder bridges SB3 and SB4 are closed. Default Setting: Not fitted |
| SB7 | The bus termination is enabled when solder bridge SB7 is closed. Default Setting: Not fitted |

Note: *Jumper JP9 must be fitted for RS-485 operations. Please refer to [Table 8](#) for more details.*

3 Connectors

3.1 Motor control connector CN1

Figure 4. Motor control connector CN1

| 19 | Pull-Down | 20 | GND |

3.8 Daughterboard extension connectors CN8 and CN9

Two 70-pinmale header connectors CN8 and CN9 can be used to connect with daughterboard or standard wrapping board to STM32100E-EVAL evaluation board. All GPIOs are available on it. The space between these two connectors and position of power, GND and RESET pins are defined as a standard which allows to develop common daughterboards for several evaluations boards.

The standard width between CN8 pin1 and CN9 pin1 is 2700 mils (68.58mm). The standard was implemented on the majority of evaluation boards. Each pin on CN8 and CN9 can be used by a daughterboard after disconnecting it from the corresponding function block on STM32100E-EVAL evaluation board. Please refer to [Table 20](#) and [Table 21](#) for more details. The shading in these tables corresponds to the power pins.

Table 20. Daughterboard extension connector CN8

| Pin | Description | Alternative function | How to disconnect from function block on STM3210E-EVAL board |
|-----|-------------|--------------------------|--|
| 1 | GND | - | - |
| 3 | PC7 | LCD_backlight | - |
| 5 | PC9 | RS485_DIR | - |
| 7 | PA9 | MC_VH | Disconnect STM3210E-EVAL evaluation board from motor. |

3.9 Audio jack CN11

A 3.5mm Mono audio jack connector CN11 is available on STM32100E-EVAL board. The speaker U12 will be bypassed when an earphone is plugged into connector CN11.

3.10 ST-LINK/V2 connector CN13 (USB connector)

Figure 11. ST-LINK/V2 USB connector CN13 (viewed from front)**Table 22. ST-LINK/V2 USB connector CN13**

| Pin number | Description | Pin number | Description |
|------------|-------------|------------|-------------|
| 1 | VBUS(power) | 4 | GND |
| 2 | DM | 5 | Shield |
| 3 | DP | 6 | |

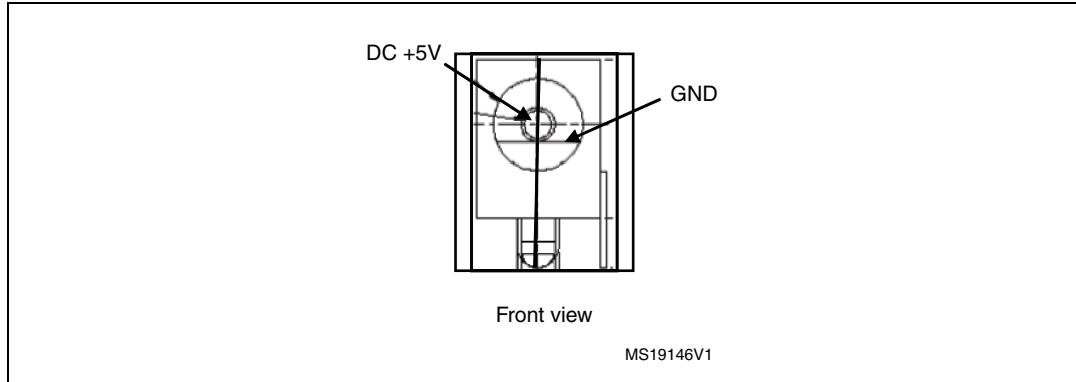

3.11 ST-LINK/V2 programming connector CN12 (reserved connector)

The connector CN12 is not mounted on the board and reserved for manufacture only.

3.12 Power connector CN14

The STM32100E-EVAL evaluation board can be powered by a DC 5V power supply via the external power supply jack connector CN14 shown in [Figure 12](#). The central pin of CN14 must be positive.

Figure 12. Power supply connector CN14
